

Feature Extraction Pipeline

ROI-cropped volumes → SAM-Med3D embeddings → pooled features → tabular classifier

Input volume (CT/MRI, 3D)

ROI extraction (lesion-centered crop + pad)

SAM-Med3D image encoder (frozen)

Pretrained

Dense embedding map ($C \times d \times h \times w$)

Embeddings

Global average pooling

Study-level feature vector (C_s)

Features

Downstream classifier (TabPFN / LoCalPFN)
